

Mining Briefs: Musgrave, Hot Chilli and more

IN *Mining Briefs* today: Musgrave gets Break;

[Karma Barndon](#) 12 Aug 2016 14:42 News

Musgrave Minerals has extended the high-grade mineralisation over 80m of strike at the Break of Day prospect on the Cue project in Western Australia after follow-up reverse circulation drilling as part of its farm-in and joint venture agreement with **Silver Lake Resources**.

High grade intersects in the interpreted footwall vein include 4m at 12.3 grams per tonne gold from 189-193m down hole, and assay results also indicate the footwall vein remained open in all directions.

Musgrave managing director Rob Waugh said as the company drilled more holes its understanding of the Break of Day gold system continued to grow.

Drilling is expected to kick off again at the prospect later in August.
